

ABSTRACT OF THE DISCLOSURE

A washing machine has a partial washing apparatus 5, which has a supersonic resonator 12 driven by an oscillator 17 to generate supersonic vibration and a supersonic vibration horn 13. A washing liquid is fed to the partial washing
5 apparatus 5 so as to be agitated by supersonic waves and then fed to an article 30 to be washed to achieve partial washing thereof. The partial washing apparatus 5 is detachably fitted to the washing machine proper 1 at approximately the center of the lid 3 thereof. The partial washing apparatus 5 may be used as a handy-type partial washing apparatus when held at the grip portion 11a thereof.
